Customer satisfaction is our motto.

TechnoFlick electronic is an ISO certified company and is widely regarded as one of the topmost manufacturers and suppliers of superior quality Electrical Transformer Components. We manufacture this range using state of the art machines and in line with the standards set by the industry. What sets us apart from the competition is the personalised way in which we meet the varied needs of our diverse set of clients. Moreover, we are able to fulfil large requirements in a timely manner and without putting a burden on the pocket.

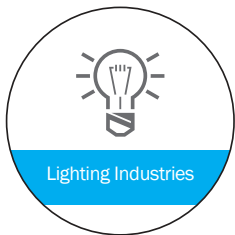

About Techno Flick

TechnoFlick electronic started its journey in 2013 with meagre capital and workforce but with a clear determination and faith in itself for manufacturing intermediate transformers. Thrust on quality, competitive price, prompt delivery and service to customers as its guiding principles, TechnoFlick electronic carved out a niche for itself in the market and went ahead to achieve further growth and excellence with time. R&D remains our forte throughout this journey.

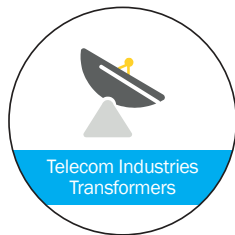

Over the years, TechnoFlick electronic, combining business discernment and engineering expertise, has firmly transformed itself into a leading manufacturer of standard magnetic components for electronic circuits. Moreover, it has also horizontally expanded its base as magnetic wound component supplier to consumer electronics, power supplies, industrial controls and computer industry.

Product range

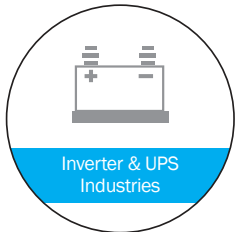

We specialize in the manufacturing of a wide variety of wound magnetic components which are listed below:

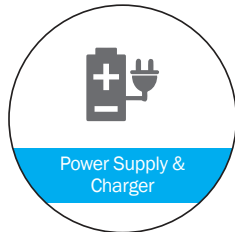

Lighting Industries

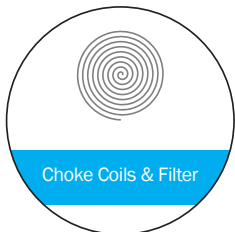

Telecom Industries Transformers

Inverter & UPS Industries

Power Supply & Charger

Choke Coils & Filter

Linear Transformer

Why TechnoFlick

- Strong R&D Support
- Continual Improvement
- Customer Delight
- Customized reliable quality products
- Competitive prices
- On time delivery

Quality Policy

TechnoFlick is dedicated to strive for customer satisfaction by adhering to their requirements and by complying with the requirements of ISO and continual improvement of its quality management system.

Our quality and production team is comprised of well qualified professionals, who are dedicated to their profession with a clear motto of customer satisfaction and service.

Raw material quality used for our products compliance We use UL & RoHS approved raw material for our products

Lighting Industries

Lighting industry is in the major transition phase moving away from fluorescent light to CFL to LED. Following factors are driving the change in the lighting industry.

- 1 Lower energy consumption
- 2 Energy losses
- 3 Longer life
- 4 Smaller size
- 5 Faster switching
- 6 Superior reliability and greater durability
- 7 Environmental issues

RR Component has moved fast to understand the requirement of lighting industry and has moulded itself to be a major supplier of wound magnetic components for the electric transformer blast used both in CFL as well as LED lighting Industries.

Telecom Industries Ferrite Transformers

These transformers are widely used in ISDN (Integrated Service Digital Network), LAN (Local Area Network) and transceivers in XDSL (X Digital Subscriber Line) network. We offer top grade signal transformer, pulse transformer for LAN, ISDN and XDSL network, low pass filter and tuning inductors for common mode chokes.

These transformers are available in standard as well as customized design to fulfil the demand of our valued customers.

Inverter & UPS Transformers

We are manufacturing & supplying a wide range of SMPS transformers for UPS & inverter industries.

Line Filter & Drum coils

We offer a comprehensive range of line filter, drum coils, which are manufactured by us keeping into consideration the quality and functionality factors.

Power Supply, Charger & Adaptors

A power supply unit (PSU) converts mains AC to low-voltage regulated DC power for TV, computers, CD players, laptop, mobile chargers & adaptor etc., Modern personal computers universally use a switched-mode power supply. Some power supplies have a manual selector for input voltage, while others automatically adapt to the supply voltage.

Toroidal Chokes & line filters

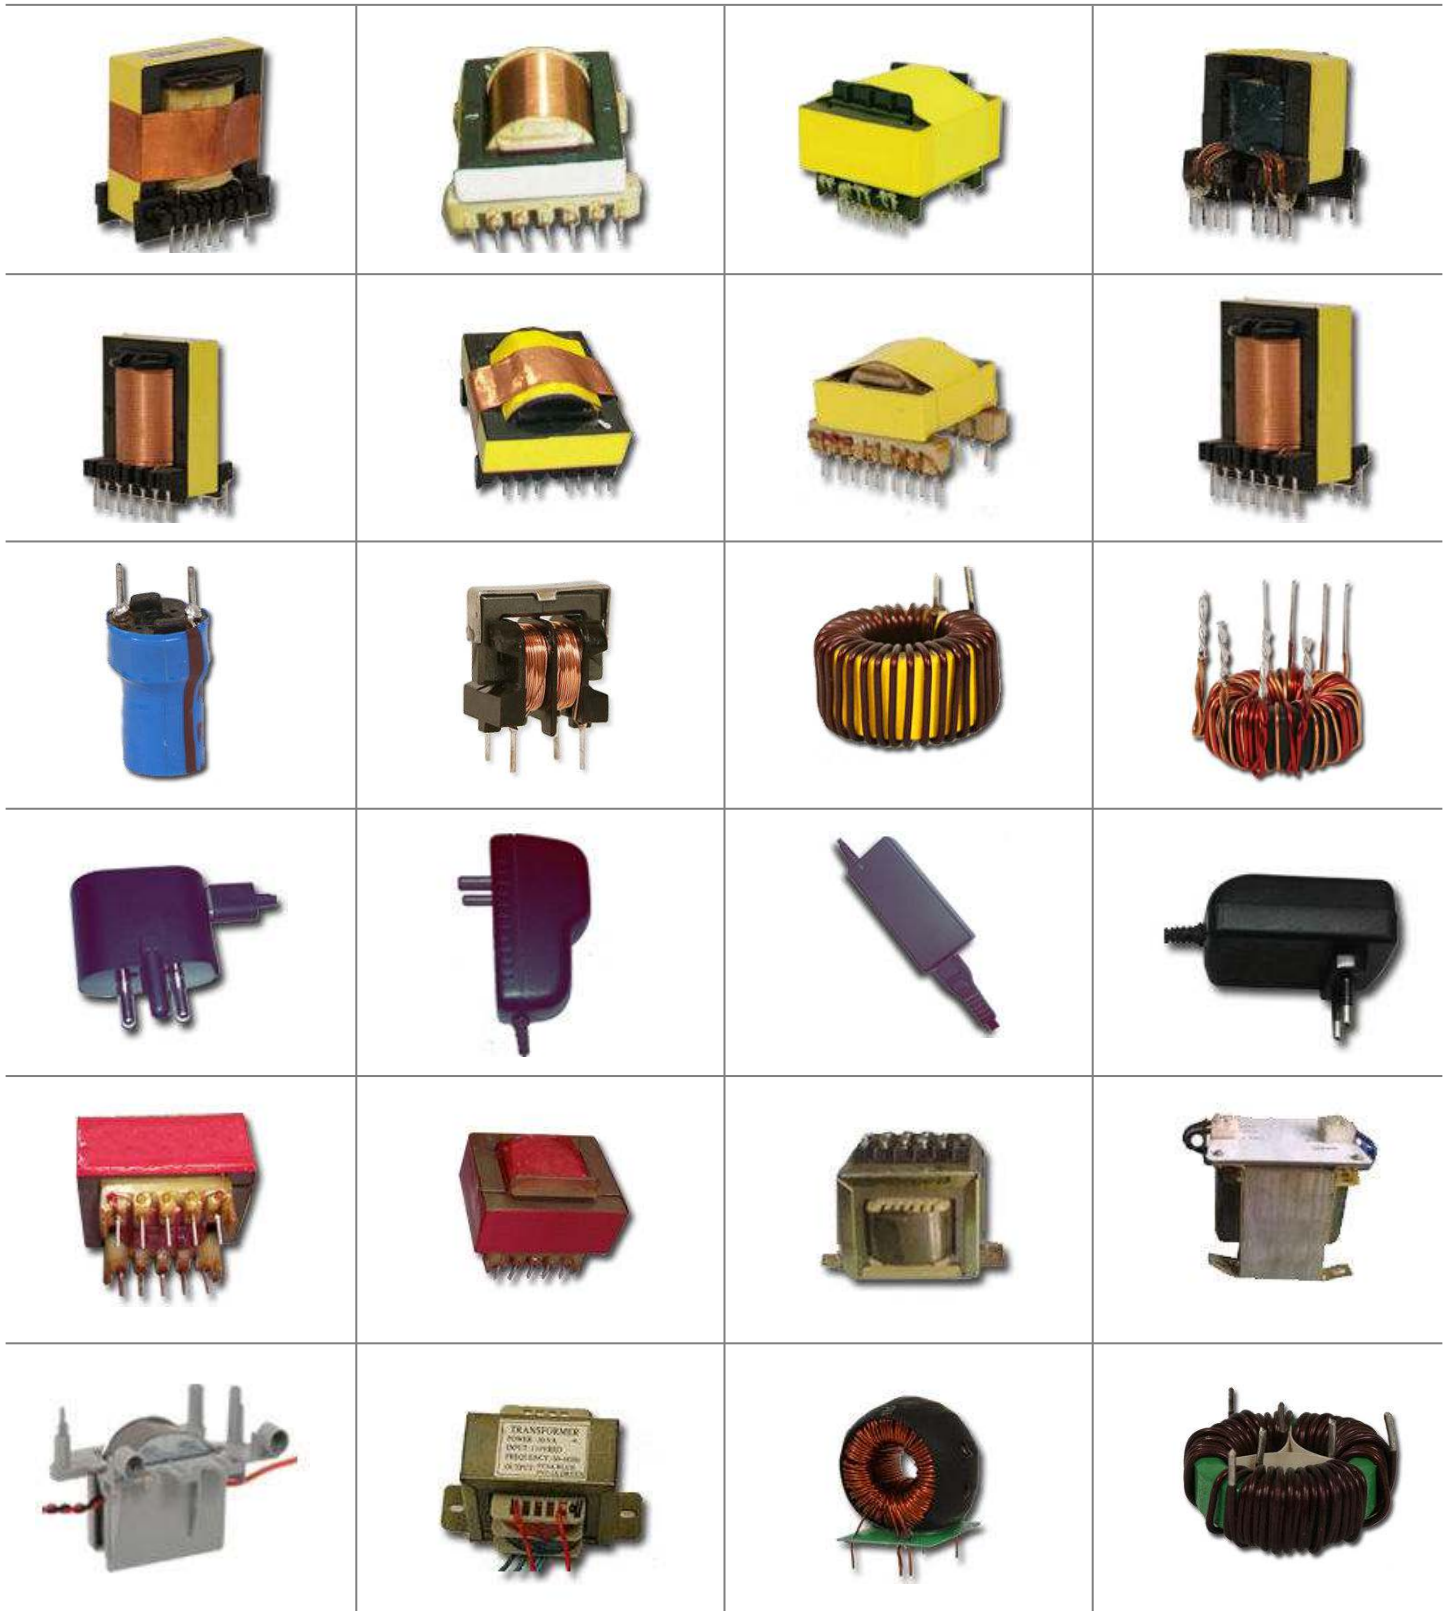

Our range includes common mode choke, differential mode choke, iron-dust choke, buck-boost converter coils and many more.

Linear Transformer

Our clients can avail from us linear transformers that find several applications in the electrical and electronics industries. This is assembled from reliable material that is manufactured.

All components undergo various quality checks and are then only delivered to our esteemed clients. Our strong parameters make these transformers current loss, shock proof, compact in design, reliable in operation, durable finish standard, robust in construction and corrosion resistance. This is treasured by the clients.

TechnoFlick
Electronic

Customer satisfaction is our motto.
